**Time Remaining 36/45 (Minutes)****Q.51****Test 8 VERB (General)****English Unit Wise**

Rainforests circle the globe for twenty degrees of latitude on both sides of the equator. In that relatively narrow band of the planet, more than half of all the species of plants and animals in the world make their home. Several hundred different varieties of trees may grow in a single acre, and just one of those trees may be the habitat for more than ten thousand kinds of spiders, ants, and other insects.

Unfortunately, half of the world's rainforests have already been destroyed, and at the current rate, another 25 percent will be lost by the year 2000. Every sixty seconds, one hundred acres of rainforest is being cleared. By the time you finish reading this passage, two hundred acres will be destroyed. When this happens, constant rains erode the former forest floor and the ecology of the region is altered forever. Thousands of species of plants and animals are condemned to extinction and since we aren't able to predict the ramifications of this loss to a delicate global ecology, we don't know what we may be doing to the future of the human species as well.

What is the point of view that the author expresses in this passage?

- (A) The author believes that the rainforest will survive
- (B) The author believes that preserving the rainforest is important to the global
- (C) The author believes that he can predict the future of global ecology.
- (D) The author believes that the extinction of species is a natural process.

STAR INSTITUTE LAHORE

Rainforests circle the globe for twenty degrees of latitude on both sides of the equator. In that relatively narrow band of the planet, more than half of all the species of plants and animals in the world make their home. Several hundred different varieties of trees may grow in a single acre, and just one of those trees may be the habitat for more than ten thousand kinds of spiders, ants, and other insects.

Unfortunately, half of the world's rainforests have already been destroyed, and at the current rate, another 25 percent will be lost by the year 2006. Every sixty seconds, one hundred acres of rainforest is being cleared. By the time you finish reading this passage, two hundred acres will be destroyed. When this happens, constant rains erode the former forest floor and the ecology of the region is altered forever. Thousands of species of plants and animals are condemned to extinction and since we aren't able to predict the ramifications of this loss to a delicate global ecology, we don't know what we may be doing to the future of the human species as well.

What is the point of view that the author expresses in this passage?

- (A) The author believes that the rainforest will survive
- (B) The author believes that preserving the rainforest is important to the global ecology.
- (C) The author believes that he can predict the future of global ecology.
- (D) The author believes that the extinction of species is a natural process.

Rainforests circle the globe for twenty degrees of latitude on both sides of the equator. In that relatively narrow band of the planet, more than half of all the species of plants and animals in the world make their home. Several hundred different varieties of trees may grow in a single acre, and just one of those trees may be the habitat for more than ten thousand kinds of spiders, ants, and other insects.

Unfortunately, half of the world's rainforests have already been destroyed, and at the current rate, another 25 percent will be lost by the year 2006. Every sixty seconds, one hundred acres of rainforest is being cleared. By the time you finish reading this passage, two hundred acres will be destroyed'. When this happens, constant rains erode the former forest floor and the ecology of the region is altered forever. Thousands of species of plants and animals are condemned to extinction and since we aren't able to predict the ramifications of this loss to a delicate global ecology, we don't know what we may be doing to the future of the human species as well.

According to the passage, more than half of all the species of plants and animals

- (A) live in twenty rainforests
- (B) live in several hundred different varieties of trees
- (C) live in a forty-degree band of latitude
- (D) live in areas where the rainforest has been cleared

Q.53

Test 8 VERB (General)

English Unit Wise

Rainforests circle the globe for twenty degrees of latitude on both sides of the equator. In that relatively narrow band of the planet, more than half of all the species of plants and animals in the world make their home. Several hundred different varieties of trees may grow in a single acre, and just one of those trees may be the habitat for more than ten thousand kinds of spiders, ants, and other insects.

Unfortunately, half of the world's rainforests have already been destroyed, and at the current rate, another 25 percent will be lost by the year 2000. Every sixty seconds, one hundred acres of rainforest is being cleared. By the time you finish reading this passage, two hundred acres will be destroyed'. When this happens, constant rains erode the former forest floor and the ecology of the region is altered forever. Thousands of species of plants and animals are condemned to extinction and since we aren't able to predict the ramifications of this loss to a delicate global ecology, we don't know what we may be doing to the future of the human species as well.

What is the current rate of destruction?

- (A) One acre per minute
- (B) One acre per second
- (C) One hundred acres per minute
- (D) Two hundred acres per hour

Rainforests circle the globe for twenty degrees of latitude on both sides of the equator. In that relatively narrow band of the planet, more than half of all the species of plants and animals in the world make their home. Several hundred different varieties of trees may grow in a single acre, and just one of those trees may be the habitat for more than ten thousand kinds of spiders, ants, and other insects.

Unfortunately, half of the world's rainforests have already been destroyed, and at the current rate, another 25 percent will be lost by the year 2000. Every sixty seconds, one hundred acres of rainforest is being cleared. By the time you finish reading this passage, two hundred acres will be destroyed'. When this happens, constant rains erode the former forest floor and the ecology of the region is altered forever. Thousands of species of plants and animals are condemned to extinction and since we aren't able to predict the ramifications of this loss to a delicate global ecology, we don't know what we may be doing to the future of the human species as well.

How many of the world's rainforests are projected to be destroyed if the current rate continues?

- (A) All of them will be gone by the year 2000
(B) Three-quarters of them will be gone by the year 2000.
(C) Half of them will be gone by the year 2000.
(D) One-quarter of them will be gone by the year 2000.

Rainforests circle the globe for twenty degrees of latitude on both sides of the equator. In that relatively narrow band of the planet, more than half of all the species of plants and animals in the world make their home. Several hundred different varieties of trees may grow in a single acre, and just one of those trees may be the habitat for more than ten thousand kinds of spiders, ants, and other insects.

Unfortunately, half of the world's rainforests have already been destroyed, and at the current rate, another 25 percent will be lost by the year 2000. Every sixty seconds, one hundred acres of rainforest is being cleared. By the time you finish reading this passage, two hundred acres will be destroyed. When this happens, constant rains erode the former forest floor and the ecology of the region is altered forever. Thousands of species of plants and animals are condemned to extinction and since we aren't able to predict the ramifications of this loss to a delicate global ecology, we don't know what we may be doing to the future of the human species as well.

What will NOT happen if the rainforest continues to be cleared?

- (A) The land will be eroded by the rains.
- (B) Many species of plants and animals that depend on the rainforest will become extinct.
- (C) The future of the human species may be changed.
- (D) The rainforest will grow, but at a much slower rate
